Purpose of Inspection:

Routine inspection while in the area.

Inspection Summary:

There was no activity at this site during this inspection, however, there was equipment on site (excavator) and it appeared that there had been activity within the last day or two. The division had recently received a NOI revision to expand this operation. The FS has indicated that will need to do an EA before they can approve the expansion. They will be close to the first of the year before they will be able to begin the NEPA work.

The access route across FS lands was in good condition, there were no erosion problems noted. The pit has been expanded since the last inspection, but was still within the previously disturbed area footprint. The operator does not have much room left before he will need the expansion area approved. The access road that looped around the pit is no longer accessible to vehicles because of the pit expansion.

The operator has been doing a good job keeping trash picked up. There was, however old equipment on site that did not look operational. If so, the operator should have it removed from the site.

Conclusions and Recommendations:

Continue to monitor the this operation when in the area.
